

# Is Your Restaurant Firesafe?

A lot of restaurant fires happen every year. Check out the following NOW. Prevent fires. Protect lives and property!

**QUESTION 1** Do you check and clean exhaust ducts, exhaust hoods and grease filters?

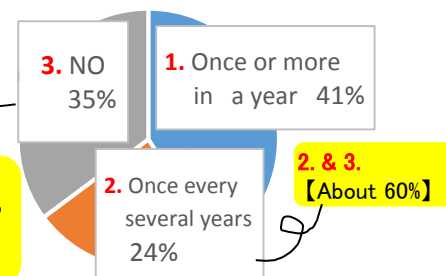

Fig. 1 Duct Cleaning

**WHY?**  
"Difficult for us."  
(No.1 cause)

2. & 3.  
【About 60%】

Oils and fats on ducts may cause fires. Check ducts and keep them clean!

- ★Oils stick and stay at hoods and ducts... Clean them regularly (EVERY DAY).
- ★Deep in ducts... Clean them every several months (in a year). Ask cleaning professionals if necessary.

※Checking and cleaning...How often? It depends on the size of your restaurant and the exhaust systems there.

**QUESTION 2** How long has it passed since you placed the extinguishers in the kitchen?

Fig. 2 Extinguisher Placement Time

Damaged, old extinguishers actually caused accidents. Check and change extinguishers if necessary.

※The labels on extinguishers tell when they should be replaced by new ones.

**QUESTION 3** Do you stay in the kitchen while cooking?

"Leaving ranges unattended while cooking" comes as the No.1 cause of restaurant fires.

"I know." 【88%】

The fact is well known, but a lot of fires occur every year. A moment of carelessness is a no-no! Watch your fire while cooking!

■The numeric data above are from *Small Restaurant Cooking Fire Questionnaire 2018 (TFD)*.

**CHECK!**

# Fire Safety Check Sheet

Leaving no cigarette ends in trash cans or ashtrays!  
Putting water before disposal!

No octopus wiring!

**NO!! CONSTRUCTION SITE FIRES**

Fires break out at construction sites, too. Don't let a fire start during remodeling work.
